

FLORIAN RONSSE

*IT Systems & Network
Engineer*

CONTACT

- ☎ +32 475 41 81 65
- ✉ florian.ronsse@gmail.com
- 📍 Oudenaarde, Belgium
- 🚗 Driving license B

NETWORKING

- UniFi (Cloud Gateway, APs)
- VLAN segmentation
- Wi-Fi 6 / Wi-Fi 7
- Tailscale VPN
- Routing & Firewall

SYSTEMS & SERVERS

- Linux (server & desktop)
- Proxmox virtualization
- Docker & Docker Compose
- Windows & macOS
- Raspberry Pi

TOOLS & SERVICES

- Jellyfin media server
- Home Assistant
- Git & version control
- SQL
- HTML / CSS

CURRENTLY LEARNING

- Python (scripting)
- Cybersecurity
- Network engineering

LANGUAGES

- Dutch (native)
- English (professional)

KEY STRENGTHS

- Rapid problem analysis
- Pattern recognition
- Attention to detail
- Self-directed learner
- Hands-on approach

PROFILE

Technical problem-solver with a strong affinity for network and systems administration. Combines hands-on IT support experience in a software environment with self-built expertise in Linux servers, network infrastructure (UniFi), and virtualization (Proxmox). Quickly connects seemingly unrelated issues and thrives in environments where in-depth troubleshooting and continuous learning are central. Seeking a role that combines technical depth, ownership, and room to grow.

WORK EXPERIENCE

Support Agent | *Cyncly (formerly Compusoft)* Nov 2022 – present

- First-line point of contact for technical issues with Cyncly software, diagnosing and resolving a wide range of software problems in customer environments.
- Collaboration with the development team on escalations and analysis of more complex issues; documentation of support cases in the ticketing system.
- Analyzing logs and error messages to quickly identify the root cause of issues — often going beyond the initial customer question.
- Clear, customer-focused communication in a B2B environment.

Logistics Assistant / IT Support | *Wit-Gele Kruis Oost-Vlaanderen* 2019 – 2022

- Deployment, configuration, and onboarding of tablets for nursing staff in the central system.
- Hardware inventory management: analysis of defective devices, reuse of functional components.
- Vehicle maintenance (mobile stock units) and administrative document processing.

Internship – Installation Technology | *Vanaudenaerde Oudenaarde* 2019

- Installation of gas boilers, radiators, and piping systems; installation of solar panels and electrical infrastructure.

HOME LAB & PERSONAL PROJECTS

Independently designed, built, and maintained home infrastructure at professional level — used as a practical lab for network, systems, and server administration.

Network infrastructure (UniFi)

- UniFi Cloud Gateway as central router/firewall; managing routing, firewall rules, and network configuration.
- Multiple access points deployed (2× UniFi Express 6, 1× UniFi U7 Pro) for full Wi-Fi 6 / Wi-Fi 7 coverage.
- Network segmentation via three VLANs: Default, Guest, and IoT — isolating smart devices and guest traffic from the main network.
- Centralized management via UniFi Controller: configuration, monitoring, and firmware updates from a single interface.

Servers & virtualization

- Proxmox hypervisor for VM management; setting up and testing multiple Linux distributions in a controlled lab environment.
- Linux home server runs Jellyfin media server, Docker host, and MCP server — 24/7 production environment for personal use.

- Docker container management via Docker Compose, multiple containers with defined services and volumes.
- Raspberry Pi running Home Assistant for home automation.

Remote access & security

- Tailscale VPN configured for secure remote access to NAS and Raspberry Pi from any location.
- Actively developing deeper knowledge in network and systems security as a next learning goal.

EDUCATION

Heating Technology – specialization year | *Sint-Bernardus Technicum*

2017 – 2019

Residential Electrical Installations | *Sint-Bernardus Technicum*

2014 – 2017

Technical secondary education forms the foundation of a strong analytical and problem-solving mindset — qualities applied daily in IT work.

MOTIVATION

Actively seeking a role with room to grow toward systems administration, network engineering, or a broader IT engineering position. I perform best in environments with technical depth, ownership of systems, and the freedom to learn and solve problems independently. My home lab is my portfolio in motion: every new technology I would use in a professional role, I first learn by building it myself.
